**Item Summary:** The 2019 Water Conservation Plan was developed and written in cooperation with North Texas Municipal Water District, our water provider and who the City of Forney is a Charter Member. The Plan was written and developed to provide the City citizens, businesses, and City staff a guidance tool to conserve our most precious resource- WATER. The Plan includes guidelines for landscape irrigation, methods for public education and goals for water use reduction which are attainable by implementing the Plan. Conserving water will enable our financial resources to be applied toward infrastructure upgrades and improvements, which are highly needed, rather than investing in additional larger capacity infrastructure which could be delayed or not required if conservation practices were utilized.

Staff recommends approval of the 2019 Water Conservation Plan.
