**Item Title:** Consider a Resolution awarding a contract to H&H Electrical Contractors, Inc for the Maintenance Improvements at Pump Station No. 2, and all related issues.

**Attachments:**
- Resolution
- Proposal (H&H Electrical Contractors)

**Item Summary:**
Recently the City employed H&H Electrical Contractors to replace a Variable Frequency Drive (VFD) at Pump Station #2. While this project was in progress, City Staff along with Freeman-Millican, Inc. the Engineer of Record for the VFD project, discovered that Pump #3 at this same location needed significant maintenance work. Pump #3 was originally installed in approximately 2007. H&H provided a proposal to arrange the pump service and transporting of the pump with Smith Pump (original pump supplier) and motor service with Shermco, Inc. This servicing of Pump #3 will ensure it will provide another 12-15 years of service, as a lead pump in the system.

H&H Electrical Contractors, Inc. of Terrell, TX has submitted a cost proposal for $42,719 with a timeframe of 147 calendar days to complete the work.

**Funding Source – Public Works Water Department FY20 Budget**

Staff is recommending approving the work with H&H Electrical Contractors, Inc.
